Photoshop can automatically recognize image content and help you locate it in an image. Click the menu button at the top of the screen and choose "Select", then click on the image to select all those areas. Choose a menu option such as "Define" or "Color" and Photoshop will take action to add or modify that content. However, a longstanding limitation of most graphic design software is that you can't manage more than one file at a time when you are working in a source document. In the screen right above where you take a picture, click the menu button and choose "Open", which opens a separate work area and lets you view and edit images. You can then add text, merge and split groups, and delete objects. When the Open menu opens, it will show you all images currently open in Photoshop or on your computer.
